

**Listing of the Claims:**

Claim 1. (Currently Amended) ~~In a ski formed of a plate and a binding, A~~  
luminescent ski, comprising:

a plate having an upper portion and a bottom portion, said bottom portion is  
adapted to contact a ground surface;

a permanent magnet which is rotatably installed on a rotary shaft in ~~an~~ the upper  
portion of the plate by a rotation wing having the same rotary shaft as the permanent  
magnet;

a induction coil which is fixedly installed in a surrounding portion of the  
permanent magnet; and

a luminescent unit with a light emitting diode which is installed in the upper  
portion of the plate and is connected with an extension of the induction coil, wherein the  
permanent magnet and the induction coil are detachably disposed in the interior of the  
plate.

Claim 2. (Currently Amended) The luminescent ski as recited in claim 1,  
wherein the luminescent unit includes a plurality of transmission windows through which  
a light of the luminescent light emitting diode transmits to the outside.

Claim 3. (New) The luminescent ski in claim 1, wherein the rotation wing is  
rotated by wind as the luminescent ski moves, generating a driving force that is  
transferred to the permanent magnet through the rotary shaft.

Claim 4. (New) The luminescent ski in claim 1, wherein the permanent magnet and induction coil are disposed in a housing and the rotary wing is disposed outside the housing of the permanent magnet and induction coil.
